

CERTIFICATE OF ANALYSIS

Purified AAV5- CMV-GFP Lot #21-273

Storage Conditions

The AAV vectors should be stored at -80°C for long term usage. When storing for frequent use, 4°C is recommended. It's not recommended to store AAV vectors at -20°C.

Shelf Life

5 years when stored at -80°C. Minimize the freeze and thaw cycle.

Shipping Conditions

Dry ice overnight

Description

AAV5- CMV-GFP vectors were produced in insect Sf9 cells by dual infection with rBV-inCap5-inRep-hr2 (Clone ID V295) (Fig. 2) and rBV-CMV-GFP (Clone ID: V445) (Fig. 3). The vectors were purified through 2 rounds of CsCl ultracentrifugations. The CsCl was removed through buffer exchange with 2 PD-10 desalting columns.

AAV5- CMV-GFP vectors are for research use only, not for any human use.

QPCR Titer

The titer of AAV5-CMV-GFP was determined with QPCR method using primers/probe corresponding to the AAV2 ITR.

Quality Control Data

The AAV vector was formulated in 1xPBS buffer pH7.4, containing 0.001% pluronic F-68, and sterilized with 0.22µm low protein-binding filter. SDS-PAGE and SimplyBlue Staining (Invitrogen) verified the purity of the vectors (Fig. 1). QPCR analysis determines the titers of the AAV samples.

Fig. 1. SDS-PAGE and Simply Blue Staining of purified AAV5-CMV-GFP. Lane M, protein ladder; lane 1, AAV8 Positive Control; lane 3, AAV5-CMV-GFP.
